RE: 140-146 GLENHAVEN ROAD, GLENHAVEN NSW 2156

I refer to your email dated 5/12/2017.

1. The stormwater relocation will be an acceptable impact on adjacent trees. The pipes will be located in the over excavation area of building.
2. The covered entry area will be <10% intrusion. Pier holes are a minor intrusion and acceptable. The entry will be a slab on piers at natural ground level. This will have an acceptable impact on the trees.
3. The proposed fence uses existing piers locations (stated on plans). The new blockwork piers will be built on top of new concrete piers. A pier and beam construction for the low wall would be the preferred method of construction. The low wall will need to accommodate any roots >30mm, which will need to be bridged. This excavation of pier holes should be supervised by an AQF5 Arborist in the tree protection zone.

I trust that this letter meets with your approval. Should you have any further questions please do not hesitate to contact me directly.

Yours sincerely,

Russell Kingdom
