LP - Local Provenance Plants

100% of Trees and at least 98% of Shrubs, Groundcovers, Ferns, Grasses and Aquatic Plants are native species of local provenance.

Collection of local native seed from vegetation being impacted by the proposal are to be used for direct seeding and propagation. Tubestock propagation needs to start as soon as practicable to ensure sufficient tubestock for initial planting in conservation areas, especially close to the north-east boundary, as well as local provenance planting in the landscape areas. Seed collection and propagation need to be ongoing and plants available as soon as conservation areas become available.

PROPOSED
Percentage Deep Soil Area Of Site Area : 25%
Percentage Landscape Area Of Site Area : 52%

landscaped area means that part of the site area that is not occupied by any building and includes so much of that part as is used or to be used for rainwater tanks, swimming pools or open-air recreation facilities, but does not include so much of that part as is used or to be used for driveways or parking areas.

Deep soil zones: if, in relation to that part of the site (being the site, not only of that particular development, but also of any other associated development to which this Policy applies) that is not built on, paved or otherwise sealed, there is soil of a sufficient depth to support the growth of trees and shrubs on an area of not less than 15% of the area of the site (the *deep soil zone*). Two-thirds of the deep soil zone should preferably be located at the rear of the site and each area forming part of the zone should have a minimum dimension of 3 metres,
